Java ● Python ● SQL ● Full-Stack Development ● Machine Learning ● Git ● Agile/SDLC

PROFESSIONAL SUMMARY

Software Engineer with 1 year of experience across the full software development lifecycle — system analysis, configuration, testing, and issue resolution for full-stack and backend applications. B.Tech CSE (Data Science) graduate (8.42 CGPA, no active backlogs) skilled in Java, Python, SQL, and relational database design. Delivered 5+ production-grade applications and an IEEE-published machine learning model (99.15% accuracy). Experienced in software testing, technical documentation, and cross-functional collaboration to meet delivery timelines.

EXPERIENCE

Software Engineer Trainee — Revature *Dec 2025 – Mar 2026*

- Developed a full-stack Password Manager application (Java, Spring Boot, Oracle DB), designing and implementing REST APIs that support 1,000+ user accounts with zero reported security incidents.
- Wrote and executed unit and integration tests across 4 application features, achieving 100% test coverage on critical modules and catching defects before deployment.
- Applied Python and SQL to analyze 10,000+ customer purchase records with a 5-member team, building a forecasting model that improved prediction accuracy by 15%.
- Reviewed teammates' code and integrated backend and frontend components using MVC architecture, cutting bug-fix turnaround time by 25% through documentation shared across teams.

Full Stack Development Intern — KodNest Technologies Pvt Ltd *Jul 2024 – Mar 2025*

- Completed an intensive internship program covering Python fundamentals, Core Java, Data Structures & Algorithms, SQL, and JavaScript, ranking in the top 15% of 50+ trainees.
- Delivered 3 database-driven CRUD web applications serving 500+ users each, applying structured test cases to validate functionality and reduce manual process time by 30%.
- Investigated and resolved 40+ real-world issues through systematic root-cause analysis, improving turnaround by 20% and standardizing error-handling practices for the team.

PROJECTS

OmniBank Systems — Employee Management Application *Java Spring Boot / MySQL / HTML / CSS / JavaScript*

- Developed a full-stack Employee Management Application using Java Spring Boot (REST APIs) and HTML/CSS/JavaScript to manage employee records.
- Implemented backend CRUD operations using Spring Data JPA and a MySQL database for storing and retrieving employee data.
- Designed a user interface with table and grid views, search filters, and digital employee identity cards, applying OOP principles for smooth client-server communication.

Brain Tumor Detection System *CNN / VGG16 / IEEE Published*

- Designed and implemented a CNN-based deep learning model (VGG16) in Python for MRI brain tumor classification, achieving 99.15% accuracy on a 3,000+ image dataset — published in IEEE.
- Built a data preprocessing pipeline (normalization, resizing, augmentation) using NumPy and Pandas, reducing model overfitting by 18% across 4 tumor classes.
- Fine-tuned a pre-trained model on the Kaggle MRI dataset, improving prediction performance by 12% over baseline through iterative evaluation.

Password Manager Application *Java / Oracle DB / JDBC*

- Engineered a secure credential storage system with OTP-based recovery and multi-layer encryption, reducing account-lockout support requests by an estimated 40%.
- Applied OOP principles with structured exception handling and Log4j logging, cutting average defect-resolution time to under 2 hours.

ATM Interface *Core Java / MySQL*

- Built a console-based ATM interface in Core Java supporting deposit, withdrawal, and balance-inquiry transactions for registered and new users.
- Designed and implemented a MySQL database schema to securely store account numbers, PINs, and other user attributes for account management.

TECHNICAL SKILLS

Languages: Python, Java, SQL, C, C++, HTML, CSS, JavaScript
Python Ecosystem: NumPy, Pandas, Scikit-learn, TensorFlow, Keras
Databases & APIs: SQL, RDBMS Concepts, RESTful APIs, MySQL, Oracle DB, JDBC, Spring Data JPA
Development Practices: Git Version Control, SDLC, Code Reviews, Unit Testing, Debugging, Technical Documentation
Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA), Spring Boot, MVC Architecture, System Design

EDUCATION

C.V. Raman Global University, Bhubaneswar, Odisha *Jun 2024*
B.Tech, Computer Science Engineering (Data Science) — CGPA: 8.42 | No Active Backlogs

D.A.V. Public School, Cantt Area, Gaya, Bihar *2020 / 2018*
Class XII — 81% | Class X — 81.5%

CERTIFICATIONS

Full Stack Web Development (Delta Program) — Apna College *Apr 2025 – Nov 2025*
CCNA: Introduction to Networks (Cisco) | Java Programming for Beginners (Udemy)
